To: 9200# Super Farm and 10,000# Limited Pro Stock Competitors

From: Dave Nelson, OTTPA Head Tech Official

Subject: Outlaw Puller Performance Fuel – Stern Oil Company  
DELVAC 1300 Super 15w40- Stern Oil Company/Mobil 1  
Fuel Sample Kits – Brokaw Supply Company  
Crop Oil Concentrate – Water Additive – Hefty Seed Company

Most of you Super Farm and Limited Pro Stock competitors have heard mention details of the extensive leg work that has been going on this past winter/spring to allow us to have an "APROVED" fuel for your class. The exciting part of this letter is to let you know the details and logistics of this fortunate situation that has been put together for our benefit.

Scott Stern of Stern Oil Company in Freeman, SD, has taken on the challenge of providing to our organization the research, expertise, support, laboratory testing, and year end points funding for the Super Farm and Limited Pro-Stock class. Scott and his staff at Stern Oil Company have formulated what is being called the OUTLAW Pullers Performance Fuel. This is a COMPLETE diesel fuel package that is a 50+ cetane rated fuel, fortified with a robust additive package that provides the following performance objectives:

- Lubrication additive for maximum fuel component lubrication
- Cetane booster
- Injector cleaning agents to keep injectors clean and actually clean dirty injectors and reduce chamber and piston deposits
- Thermal and corrosion inhibitors
- Biocide to inhibit the growth of microbes, fungi, and bacteria

**For the 2008 pulling season, this Outlaw Pullers Performance Fuel will be the REQUIRED fuel for both 9200# Super Farm and 10,000# Limited Pro-Stock Tractor Classes. NO OTHER ADDTTIVES ARE ALLOWED IN THE FUEL**

Before we started this venture, we contacted and surveyed the major fuel component suppliers that you Outlaw Pullers purchase your parts from. Their input is what led us and Stern Oil Company to the above formulation.

Stern Oil Company will be producing a 5000 gallon batch of this fuel that will have a single "fingerprint". This will allow for complete and accurate testing results. The fuel in tractor "A" should be the same fuel in tractor "B," and tractor "C," and so on. Field sampling and testing will be completed by me (head tech official) and the Tech Services Staff. We will be using newly purchased electronic fuel testing equipment this summer. Tech Services will have a supply of this fuel, so our sample should match the sample we take from your vehicle. By calibrating our equipment with a known sample it will take out any margin of error due to humidity, temperature, elevation, and etc. If we come upon samples that are not within the spec, we will then send the sample to Stern Oil Company for a complete and accurate laboratory test that will verify the

fingerprint and contents of the suspected sample. **THIS RULE WILL BE ENFORCED!** The ever so famous excuse of “I have ‘xyz’ association fuel in my fuel lines, so it’s probably contaminated,” **WILL NOT BE ACCEPTED.** Drain your fuel tank, refill with Outlaw Pullers Performance Fuel, and when you run your tractor to warm it up, that’ll get the old stuff out.

Included in this letter is the order form and details of how to obtain this Outlaw Pullers Performance Fuel. It will be sold and distributed by Stern Oil Company of Freeman, SD, and Council Bluffs, IA. Costs range from \$8.39 - \$10.09 per gallon depending upon if you get it in 55 gallon drums or 5 gallon pails. See included order form to arrange delivery or pickup. It is scheduled to be available mid May, but orders can be placed immediately. **Any questions about purchasing, delivery, or pickup should be directed to Stern Oil Company at 1-800-477-2744.**

### **DELVAC 1300 Super 15w40 – Exxon Mobil 1/Stern Oil Company**

Exxon Mobil 1 and Stern Oil Company has also committed to sponsoring the 9200# Super Farm and 10,000# Limited Pro-Stock Tractor Classes via free oil and additional points money.

- Sponsorship #1: They are offering a BUY 1 gallon and get 1 gallon FREE of their DELVAC 1300 Super 15w40 oil. This is available for ordering via Stern Oil Company with your Fuel and Crop Oil orders. This oil offer and fuel is available to all Outlaw classes.
- Sponsorship #2: At selected events this summer, to be named at a later date, Exxon Mobil and Stern Oil will pay a Bonus check to the 1<sup>st</sup> place winner if they are running DELVAC 1300 Super 15w40 oil in their tractor. The oil will be sampled and sent in for lab testing to verify the 1<sup>st</sup> place competitor is running the DELVAC oil. If the competitor is not running the DELVAC oil, the bonus money will roll to the next event sponsored to be combined with that bonus check. This sponsorship is limited to the Super Farm and Limited Pro-Stock tractor classes.
- Sponsorship #3: Additional year end points bonus money will also be paid to the Super Farm and Limited Pro Stock classes by Stern Oil Co. and Exxon Mobil.

At Diamond, MO, and Hubbard, IA, we will have Exxon Mobil 1 stickers for your tractors. These must be in a visible location before you will be eligible for the above sponsorship.

### **FUEL & WATER SAMPLE KITS – Brokaw Supply Company**

As in the past, OTTPA competitors in the Super Farm and now in the Limited Pro-Stock class are required to have Sample Ports on both the Fuel and Water lines of your vehicle. For simplicity in the distribution of these sample kits, they can be purchased from the company that I own – Brokaw Supply Company of Fort Dodge, IA. The costs of these complete kits are \$30.50 + shipping. This kit includes the appropriate fittings, hose, valve, and hose barbs for 2 sample ports - Fuel & Water. Please get them ordered. Delivery time is 3 days or less.

A Sample Port is **REQUIRED** on all vehicles in the Super Farm and Limited Pro-Stock Class. No samples will be pulled from the supply tank anymore. **WE WILL TAKE THE SAMPLES FROM THE ACTUAL FUEL/WATER LINE TO ASSURE ACCURACY.**

- Fuel sample ports must be in the fuel line as close to the pump as possible.
- Water sample port must be on the pressure side after the water pump.

## **CROP OIL – Water Additive – Hefty Seed Company**

A NEW sponsor this year for the Super Farm and Limited Pro-Stock Class is Hefty Seed Company of Baltic, SD. They have supplied us with Crop Oil Concentrate to be used as your water additive.

**This will be the only allowed Additive in your water. No other additives allowed. Pullers who currently run crop oil recommend 8 oz or less per gallon of water.**

Water samples will be pulled this summer to verify the conforming to this rule.

This Crop Oil will be distributed via Stern Oil Company along with your fuel. Each puller will receive 1 free 2.5 gallon jug of this crop oil along with your order of fuel. In order to verify that everyone is getting 1 free 2.5 gallon jug, each puller must fill out the order form when ordering fuel. If 3 people are purchasing fuel together, 3 separate orders must be placed.

As the 2008 season is just 4 weeks away, I hesitate in even bringing this fuel and crop oil rule as a requirement in 2008. However, in these 2 classes this is a huge area of concern and is necessary to keep the classes competitive and an atmosphere of clean-fair competition. This project was talked about and has been in the works since Kansas City and the details are finally being ironed out. Please help put a positive thought towards this, as it is for the betterment of your class.

As we approach this busy summer, and I take on the challenge of this new role as Head Tech Official, I look forward to helping us become more organized and consistent in our rules and safety. I do not come into this role as being the expert or knowing every answer. But I do ask for your help in improving & developing the role of OTTPA Technical Services. It's been long overdue and I am excited to lead and help our organization in this area!

Excited to help the OTTPA Organization,

Dave Nelson
